ABSTRACT

This document provides a series of tables and a set of profiles concerning higher education in the south, 1973-74. Tables cover population, institutions of higher learning, enrollment and degrees, student finances, institutional finances, faculty, and graduate education. The profiles are designed to highlight some of the more significant characteristics of the economy, educational structure, and public higher educational pattern of the Southern Regional Education Board (SREB) states. FOREWORD

This *Fact Book on Higher Education in the South, 1973 and 1974* is the first SREB Fact Book which reports an actual drop in total enrollments for one or more SREB states. If the current levelling off in college attendance were confined to states nearing the higher educational goals to which they have aspired, such stabilization might be viewed with something less than alarm. Unfortunately this is not the case. Enrollments are slowing down in states with some of the largest attendance gaps, compared with the nation. The general association between a state's educational viability and its economic well-being continues to be borne out.

As states plan for better adaptation to student needs they find themselves having to compare notes with other states and with other systems. Educational planners need to be aware of national norms and of regional norms. This *Fact Book* is highly selective and provides only a bare introduction to the growing dimensions of the current and developing postsecondary scene. We hope it can to some extent serve to assist in continued progress toward more effective provision of postsecondary educational opportunity in the Southern region.

WINFRED L. GODWIN
President

PREFACE

This *Fact Book on Higher Education in the South, 1973 and 1974* consists of two parts: first, a series of tables providing basic comparative information and second, a set of "profiles." The tables are grouped according to subject, and an index is provided for ready reference.

Most information presented was derived from published sources documented with the tables and in the bibliography. Among the organizations providing special access to data were the U. S. Office of Education in Washington, D. C., and its regional offices in Atlanta and Philadelphia. Their assistance and that of all others who contributed to the compilation of this *Fact Book* is gratefully acknowledged. As always, suggestions, criticisms and identification of errors are invited.

E. F. SCHIETINGER, *Director of Research*

PATRICIA P. MCARVER, *Research Assistant*

SOURCE: U.S. Office of Education, *Opening Fall Enrollment*, 1973 preliminary data and *Projections of Educational Statistics to 1980-81*.

NOTE: SREB-state enrollment projections for 1981 assume a continuation of the current regional share of U.S. enrollments as forecast by the U.S. Office of Education. Enrollment shares within the region are assumed to continue redistributing in a pattern similar to that of the latter 1960's at a diminishing rate of change.

REGIONAL AND STATE PROFILES

The following series of profiles is designed to highlight some of the more significant characteristics of the economy, educational structure and public higher educational support pattern of the SREB states. Since these profiles have been left uncluttered by documentation, the following statement on sources is appropriate.

Population figures are from the U.S. Bureau of the Census. Percent urban population is calculated from estimates made by Sales Management, Inc., in its 1973 *Survey of Buying Power*. Per capita personal income statistics are 1973 preliminary figures published by the U.S. Department of Commerce in *Survey of Current Business*, April 1974.

Total college enrollment is a head count of all students—resident and extension, full-time and part-time. Both students in degree-credit and in occupational programs at institutions of higher education are included. These figures are provided by the U.S. Office of Education; the percentages enrolled at private and at public institutions are derived from that source. The percentage of students enrolled in public 2-year colleges is calculated by dividing students in public 2-year colleges by total college enrollment, public and private.

"Enrollment as a percent of population aged 18-24" is the 1972 total enrollment divided by total 18- to 24-year-old population for 1972. This is a convenient yardstick of college attendance but a rough one since significant numbers of students enrolled in college are not in that age group. Also it must be remembered that out-of-state students are included in the enrollments of the state where in attendance. Another measure of college attendance is first-time fall 1972 enrollment as a percent of 1972 high school graduates. The figure likewise has limited validity because of first-time students who are not recent high school graduates and because of interstate student migration. The U.S. Office of Education's *Digest of Educational Statistics*, 1973, was the source for data on high school graduates. The percent of a state's college students who are out-migrants came from *Residence and Migration of College Students*, 1968, also published by the U.S. Office of Education.

Counts of public and private institutions are from *The Campus Resources of Higher Education in the United States*, published by the Academy for Educational Development in 1973. This source, based on the classification of the Carnegie Commission on Higher Education was used in lieu of the U.S. Office of Education's *Education Directory* because it tallies the number of schools by campuses rather than by systems. The 1971 compilation, *Earned Degrees Conferred* by the U.S. Office of Education is the source for earned degrees in each state.

State operational tax appropriations for 1973-74 are from *Appropriations of State Tax Funds for Operating Expenses of Higher Education*, published by the National Association of State Universities and Land-Grant Colleges. Student fees collected by institutions and reapportioned by state governments and capital outlays are excluded. State tax revenues for 1973, used to show what percent of state taxes are devoted to higher education, are from the U.S. Bureau of the Census publication *State Tax Collections in 1973*. Preliminary 1973 income statistics from the *Survey of Current Business*, April 1974, are used with appropriations data to show state appropriations per $1,000 of personal income.

Average faculty salary at the major state university, at senior public institutions, at 2-year public institutions, and for all public institutions were included in data provided by the respective state higher education agencies with the exception of Virginia. Figures for that state were taken from the American Association of University Professors' salary tables published in the summer, 1974 *AAUP Bulletin*.

For each state the higher educational governing and or coordinating agency is listed and the scope of its functions is shown. In states where jurisdiction over two-year colleges is separate, the responsible agency is also given.

Most information presented here is derived from published sources and listed with the tables in the preceding sections and in the bibliography.
